

# TPR announces additional investment with Aquarius Engines

February 3, 2022

TPR has made an additional investment in Aquarius Engines, an Israeli startup regularly traded in the Israeli stock exchange market (TASE: AQUA) since December 2020, which has original technology for developing epoch-making engines.

(Aquarius Engines web site: [www.aquariusengines.com](http://www.aquariusengines.com))

Aquarius has successfully realized “free piston linear engine,” which is very small, light-weight and highly efficient, and the company is aiming to supply accessible and affordable electricity systems with this linear engine, and to provide various electric supply solutions for the upcoming market demands. And Aquarius also plans to apply its technology for hydrogen fuel business and development of generator equipped with Aquarius linear engine.

The investment from TPR will accelerate further collaboration of both companies as a strategic partner, for the performance improvement of Aquarius linear engine and generator, and for the development of next-generation fuel engine parts. And this will contribute to the SDG’s and carbon-free society.
