### Stable increase in AUM

**Total AUM in Japan and overseas grew to ¥4 tn (as of end of Sep. 2021)**  
 (Increase of ¥0.9 tn from the announcement of the Long-Term Management Plan)

### 3. Investment Management Business : Breakdown of Operating Revenue by Area

#### Factors affecting profit growth in FY2022 related to the revision of forecasts

Significant increase of ¥21 bn from the previous forecast. The main factor was the recording of future fees\* associated with an increase in the market value of real estate in value-added funds in the U.S. and other countries.

#### Investment Management Business – Business Profit

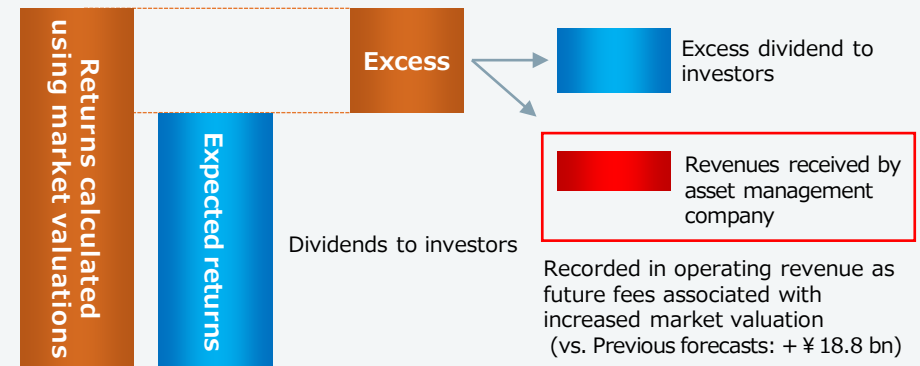

#### 【\*Recognition of future fees associated with increased market value of real estate in funds in the U.S. and other countries】

- For some funds, incentive fees are established in which the management company receives a portion of the excess over expected returns.
- Such fees are received near the end of the fund as returns are determined, but in accounting, the company updates returns as needed using market valuations of real estate and records the fees it expects to earn as operating revenue each period (no cash inflows at this time).
- Although it will contribute fully to operating revenue and operating profit, its contribution to profit attributable to owners of parent will be limited (no cash outflow at this time) because a portion will be posted as profit attributable to non-controlling interests in the form of contingency fees to the officers and employees of the asset management company.

#### 【Accounting procedures】

\*This is a general description and may differ from the design of our funds.

## 4. Investment Management Business : (Reference) Classification of Funds

### Classification by Asset Liquidity

<b>Open-end</b>	<p>A type of REIT or fund that allows investors to withdraw their investment in REIT units or funds upon request.</p> <p><b>Examples :</b> Private REITs</p>
<b>Closed-end</b>	<p>A type of REIT or fund that does not allow investors to withdraw their investment in REIT units or funds upon request.</p> <p><b>Examples :</b> Listed REITs … Secure liquidity by trading in the market Private funds … Acquire and manage real estate with a set investment and management period of several years, and eventually sell it to distribute returns to investors</p>

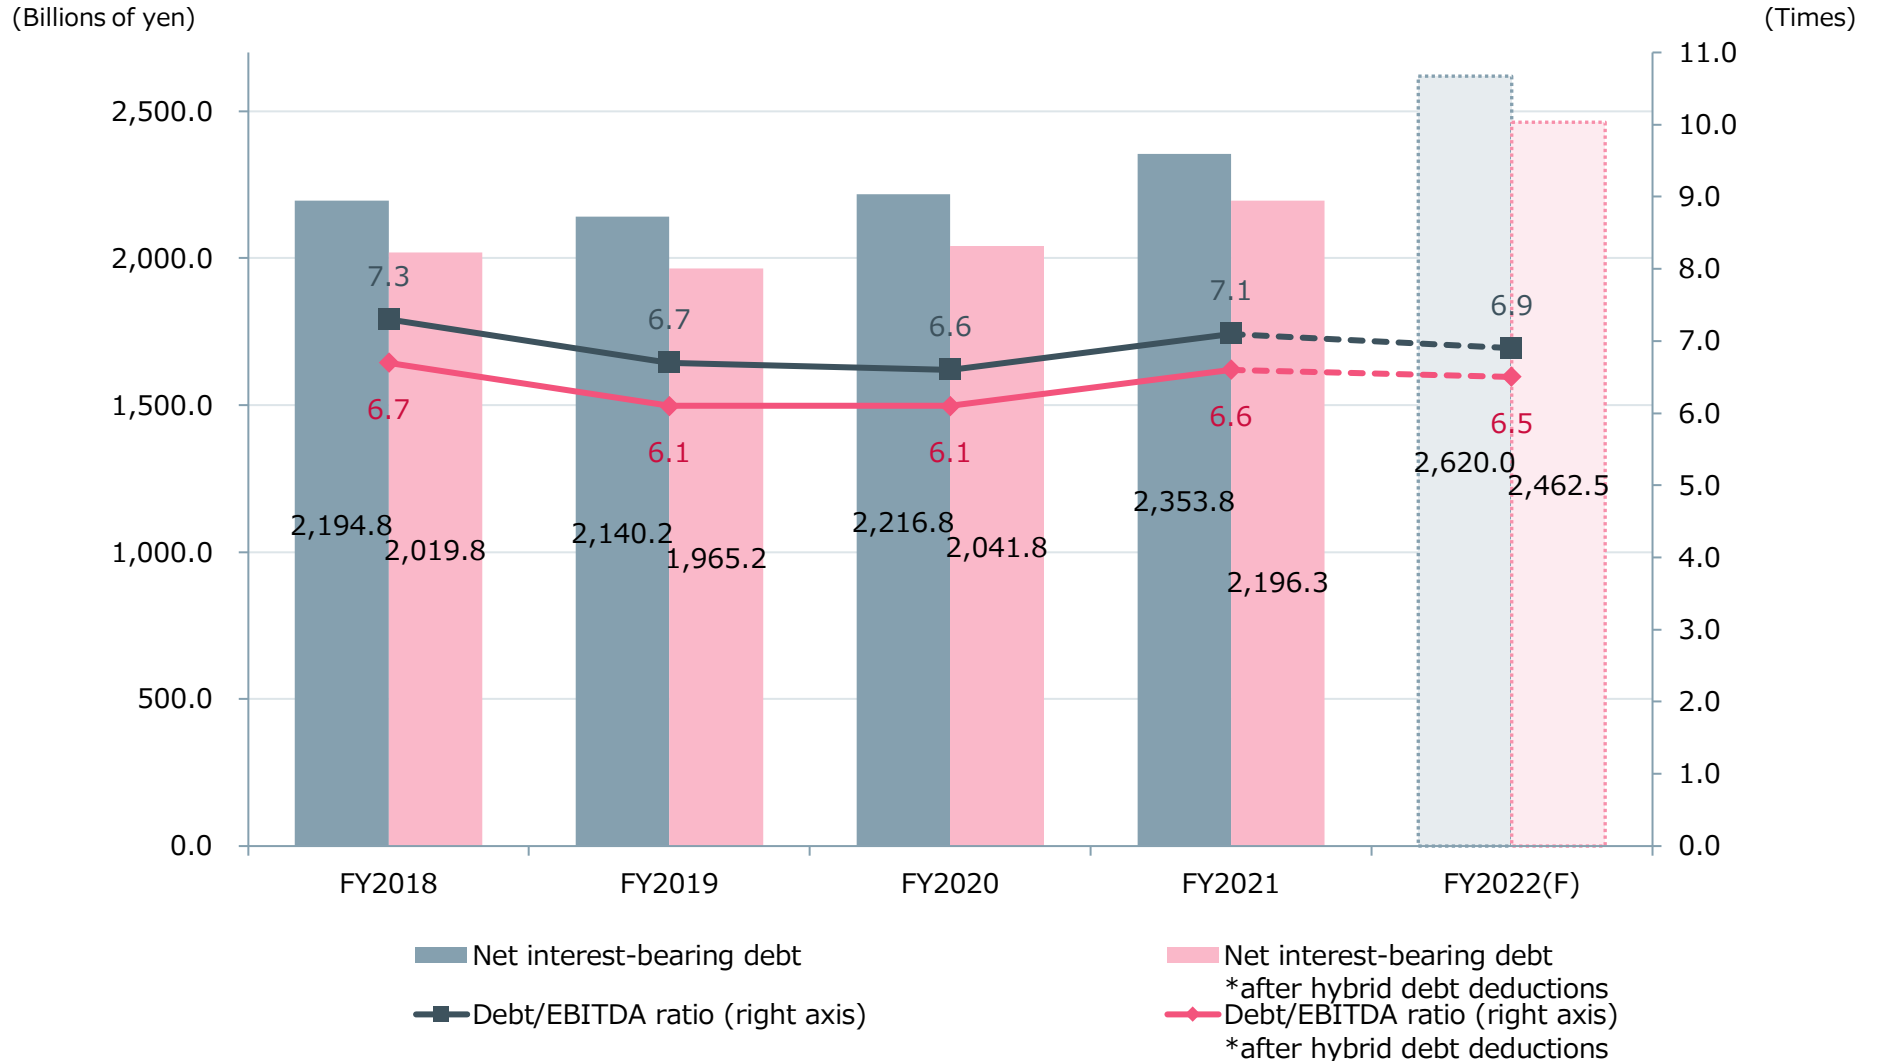

### Classification by Fund Strategy (Source: Website of the Association for Real Estate Securitization)

<b>Core</b>	<p>The fund aims to generate a target return mainly from rental income returns by income-producing property investments.</p> <p>*Capital return is not considered as a main target return, but the fund takes a low to medium market risk.</p>
<b>Core-plus</b>	<p>Same as Core Fund, the fund aims to generate a target return mainly from rental income returns, but some from capital returns.</p>
<b>Value-added</b>	<p>The fund aims to generate a target return mainly from rental income returns as well as capital returns by increasing the yield and value of undervalued properties.</p> <p>*Generally, the value-added strategy has a higher risk than the Core and Core-plus strategy because the fund often invests in low yield properties with some physical obsolescence.</p>
<b>Opportunistic</b>	<p>The fund aims to generate a target return mainly from capital returns by trading properties based on the market forecast.</p> <p>*This is a higher risk strategy including adaptive reuse, bulk trade and M&amp;As.</p>
