Notice concerning Application for Marketing Authorization of KD-370, Combination Vaccine for Pertussis, Diphtheria, Tetanus, Inactivated Polio and Hib

Meiji Holdings Co., Ltd. announced that its subsidiary KM Biologics Co., Ltd. submitted marketing authorization application of combination vaccine KD-370 to the Ministry of Health, Labour and Welfare (MHLW) today. KD-370 is a combination vaccine for pertussis, diphtheria, tetanus, acute poliomyelitis (polio) and *Haemophilus influenzae* type b (Hib).

KM Biologics has developed KD-370 in response to the MHLW's request from 2013 to develop vaccines with high priority. When KD-370 becomes available it is expected to reduce the number of routine vaccination shots for infants, thus reducing the burden on infants and their guardians.

The impact of this matter on consolidated earnings forecasts for the fiscal year ending March 31, 2023 is expected to be minor.
