

## Launch of the ENECHANGE EV Charging app, our one-stop app for EV charging with no monthly fees

ENECHANGE Ltd. has launched a dedicated smartphone application for the ENECHANGE EV Charging Service. The app allows users to search for EV charging spots that are being installed across the country. The app functions as a one-stop service: it allows users to check charger availability, register to start charging, and complete their charging session and pay, all without leaving the app.

### ■ Overview of ENECHANGE EV Charging Application

Until now, EV charging services required users being issued a special card before they could actually charge. The ENECHANGE EV Charging Service has launched its dedicated app to allow EV drivers to charge their vehicles in a smart, hassle-free way. Moreover, the ENECHANGE EV Charging Service aims to further spread EV charging infrastructure by installing EV charging stations. Combined with the app's one-stop functionalities, we hope to show drivers the potential and ease of EV use.

The ENECHANGE EV Charging app allows anyone to use EV and plug-in hybrid vehicle (PHEV) charging stations anytime they want, without monthly fees. In addition to searching for EV charging spots on a map and checking their availability of s, users can also register their user information on the spot for a one-stop service that includes checking the charging status, making payments, and checking usage history.

### <App features>

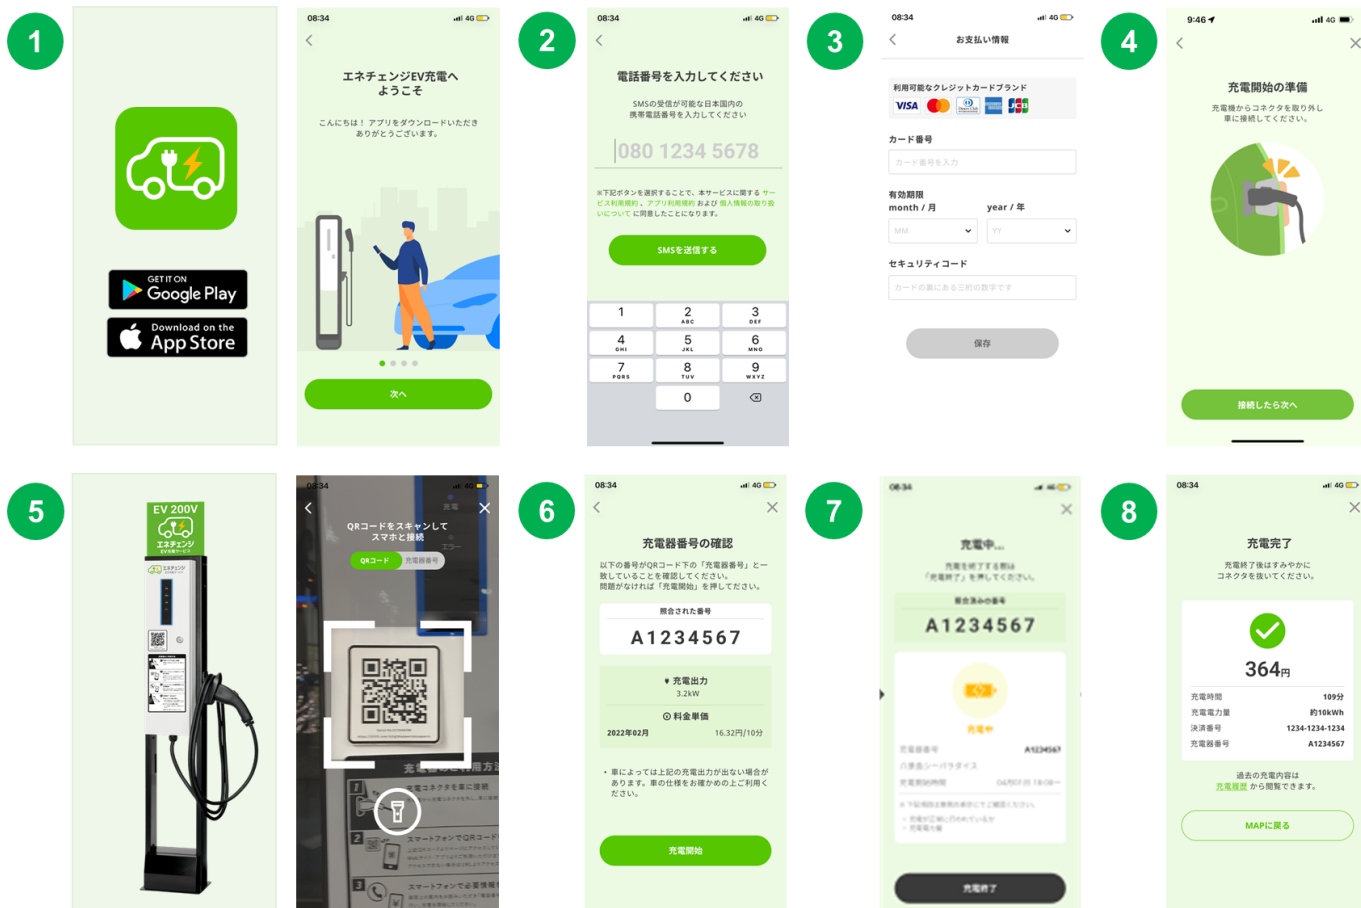

1. One-stop EV charging spot search and charging
2. Search for EV charging spots on a map
3. Search by charging output
4. The map shows you which EV charging spots near your current location are available for charging
5. Provides directions to ENECHANGE EV charging spots with photos.

### ■About ENECHANGE EV Charging Service

The ENECHANGE EV Charging service allows installation of EV charging facilities at minimal cost, ideal for charging at public locations such as commercial facilities, lodging facilities, and other public destinations. To improve convenience for EV drivers, we promote the development of domestic EV charging infrastructure by providing EV charger hardware, applications for users, and charging management systems for site hosts.
