

ACOM brings Google Pay™ to its “AC MasterCard” holders

31 May 2022 - ACOM today brings Google Pay to its “AC MasterCard” holders.

Google Pay is a safer way to pay contactless where customers do not need to handle cash, plastic card or touch physical buttons. Once “AC MasterCard” is added to Google Pay, customers can make fast and cashless payments with their smartphones that support NFC, Osaifu-Keitai (Wallet Application) 6.1.5 or higher, and Android™ 5.0 or higher in QUICPay merchants (over 170 million places in Japan) and MasterCard merchants accepting tap-to-pay.

It also enables customers to reload Suica cards on Google Pay and make purchases in apps and online. Customers can easily set their “AC MasterCard”, and automatic cash back when using “AC MasterCard” will also continue to apply.

[Overview of this service]

Applicable Card	AC MasterCard (including virtual cards)
How to use	The touch payment function can be used by preparing a compatible terminal and setting an applicable card on the Wallet app.
Where to use	-QUICPay merchants. -MasterCard merchants in Japan and around the globe accepting tap-to-pay. -Apps and website where Google Pay is accepted.

- About Google Pay

Google Pay is a contactless mobile payment services that can be used with Android smartphones. By adding credit card or other payment methods, customers can make payments with their smartphone. The same security technology as Google's other services is used to protect their account and data, so customers can use this payment method safely and securely.

Google Pay is accepted at MasterCard merchants in Japan and around the globe accepting tap-to-pay and QUICPay merchants (terminals) in Japan only across convenience stores, supermarkets, drugstores, large theme parks and more with the device that support NFC, Osaisu-Keitai (Wallet Application) 6.1.5 or higher, and Android™ 5.0 or higher.

Customers can also use Google Pay for online payments in the app or on the web. Payments can be completed with just a few clicks on the web, and there is no need to enter shipping address, contact, or credit card numbers each time customers make a purchase. It's quick and easy, and at the same time very secure and private, since the merchant will never know customer's credit card number.
