Inquiries: General Manager of Human
Resources & General Affairs,
Toshiki Watanabe
Phone number: 072-223-4111

Notice Concerning Introduction of Solar Power Generation Facilities

We are pleased to announce that we have decided to introduce a solar power generation system based on the PPA model (*1) at the Onahama Manufacturing Site's Otsurugi Plant to provide a part of the factory's electricity needs.

In an effort for the Company to achieve carbon neutrality by 2050, our goal is to reduce CO₂ emissions by 30% by 2030 compared to the fiscal 2013 levels.

As part of this effort, we have decided to introduce a solar power generation system at the Daiken Plant. These efforts will not only reduce CO₂ emissions but will also enable us to more easily secure communications infrastructure and the power to resume operations even in the event of infrastructure disruption due to a large-scale disaster.

While considering the expansion to other plants in the future, we will continue to work on utilizing renewable energy and realizing a sustainable society.

1. Installation location

Otsurugi Plant, Onahama Manufacturing Site (Iwaki City, Fukushima Prefecture)

2. Amount of power generation

1,411 MWh / year (assumed)

3. Start date of power generation

February 1, 2023 (planned)

* PPA is an abbreviation for Power Purchase Agreement. It is a business model in which a PPA operator installs solar power generation equipment on the Company's premises free of charge, and the Company purchases the electricity generated.
