* Ichigo Green Infrastructure Investment Corporation (“Ichigo Green,” 9282)

October Ichigo and Ichigo Green solar and wind power generation was 17,344,763kWh, 4% below forecast, but on a year-on-year basis, power generation was the same as October 2021.

Despite ongoing maintenance work at the Ichigo Yonezawa Itaya ECO Power Plant and a partial power production suspension at the Ichigo Showamura Ogose ECO Power plant due to the cable theft that occurred on September 13, 2022, the impact on power production revenue is minimal because reduced power production is covered by manufacturer warranty and insurance, respectively.

¹ CO2 reduction is calculated as 0.433kg CO2 per kWh, except for the Ichigo Nago Futami ECO Power Plant (owned by Ichigo Green) for which it is calculated as 0.692kg CO2 per kWh, using the adjusted CO2 emission factor disclosed by the Ministry of Environment on

March 1 of each year as a fixed constant until February of the following year.

² Forecast power generation is a 50% probability mean annual production forecast (P50 forecast), calculated by an independent, third-party technical consulting firm, that serves as the base forecast for each solar and wind power plant's operating plan.

Note: In addition to its own solar and wind power plants, Ichigo manages 15 renewable energy plants owned by Ichigo Green. Data for each of these Ichigo Green plants are disclosed in today's Ichigo Green release "Solar Power Generation & CO2 Reduction Data" at www.ichigo-green.co.jp/en.

Ichigo discloses realtime solar and wind power production and CO2 reduction data for each Ichigo and Ichigo Green solar and wind power plant at www.ichigo.gr.jp/en/business/sustainable/eco/plant.
