(*1) Forecast Power Generation is based on the Forecast Power Generation (P50) provided in the independent technical report.

(*2) Actual Power Generation is based on SCADA (Supervisory Control and Data Acquisition) system data generation.

(*3) CO2 reduction is calculated as based on adjusted emission coefficient by electric power companies. For more details, please refer to the link (https://www.env.go.jp/press/104919.html).

2. Solar Power Generation During the Month of October 2022

The Fund portfolio generated actual electricity production of 16,982,382kWh during the month of October 2022, equivalent to 96.88% of the forecasted electricity production. As announced in the "Notice Concerning Suspension and Resumption of Power Generation at Assets Under Management" on November 1st 2022, Temporary suspension of power generation at CS Daisen-cho Power Plant (A), Daisen-cho Power Plant (B), and CS Hiji-machi Dai-ni Power Plant has already been resumed. The impact to the power generation reduction in this underachievement during October was approximately 6.91% of the fund portfolio generated actual electricity production. In principle, the impact caused by Typhoon 14th on the amount of generated electricity at the CS Hiji-machi Dai-ni Power Plant will be covered by insurance reimbursement.
