JDI to Exhibit New 20.8-Inch Rælclear at CES 2023

JDI will exhibit the new 20.8-Inch Rælclear at CES 2023 in Las Vegas from January 5th to the 8th, 2023. Visitors will be able to envision a new future of design combining artificial intelligence and the technology of Rælclear.

AI-generated painting displayed on a 20.8-inch Rælclear monitor. The AI creates the image from the voice commands of two people standing on opposite sides of the monitor.

An artificial intelligence engine will be paired with a 20.8" Rælclear monitor to create a futuristic interactive communication experience for two people, enhanced and added to by the AI. JDI will continue to integrate Rælclear with various other technologies and designs and is working to spark social innovations through these new pairings.

Reference Info

Rælclear can display content without the use of a backlight. It has a glass-like transparency

(84% transmissivity) with simple design and construction, including a built-in power supply, driver circuit, and HDMI interface. Displayed images can be viewed with full transparency from both front and back.
