- Core products are ammonia related products and sulfuric acid related products
- FY2022 ammonia domestic production capacity share 11\%
- Focus on high value-added products, such as high purity sulfuric acid and TEPIC, instead of pursuing scale

- As announced in August 2021, the production of melamine terminated in June 2022 and end sales in December 2022
- We will concentrate its management resources on high value-added products and products with a high market share

## 2. Current status and prospects of melamine

Unlikely to secure stable profits in mid-long term, and to expect profit expansion by new investments

- World production capacity is twice of demand (our estimate)
- Domestic production capacity (2 companies including Nissan Chemical) is 3 times of demand (our estimate)
- Prices were on recovery trend from 2H FY2021 to 1Q FY2022, but sharply dropped afterward.

Always unstable due to cheaper Chinese products (Chinese production capacity accounts for about 70\% of the world)

## 3. Actions to be taken

(1) Melamine: (A) stop production permanently in June 2022, (B) end sales when inventory eliminated
(2) Expand sales of Chemicals segment by concentrating on high value and high share products
(3) Reassign melamine plant operators in Toyama plant
(4) Continue to sell melamine derivatives by purchasing melamine as raw materials

## 4. Restructuring costs

Melamine plant shutdown related costs (extraordinary losses of 1.79 billion yen) were compensated by gain on sales of investment securities (recorded in 2Q FY2021)

## 5. ESG

By shutdown of melamine, $26,000 \mathrm{GHG}$ ( t -CO2) or equivalent to about $7 \%$ of FY 2018 GHG (see p53) estimated to be reduced
