FY2023 1Q Results

- Operating profit: Decreased due mainly to an overall decline in sales volumes of BT materials and aromatic chemicals along with stagnant polyacetal (POM) market prices.
- Ordinary profit: Decreased reflecting such factors as downturns in methanol market prices and a resulting decrease in equity in earnings of affiliates related to overseas methanol producing companies.
- Profit attributable to owners of parent: Increased due primarily to the recording of gain on step acquisitions in connection with the inclusion of Mitsubishi Engineering-Plastics Corporation into the scope of consolidation.

FY2023 1Q Results

Net sales: Decreased due mainly to a decline in methanol market price and lower sales volume of MXDA.

Operating profit: Decreased due mainly to lower sales volumes of MXDA and MMA products.

Equity in earnings of affiliates: Decreased due to lower equity in earnings of affiliates related to overseas methanol producing companies resulting from decline in methanol market price and other factors.

		FY2023 1Q Results (Compared with FY2022 1Q Results)	
Natural Gas Chemicals	Methanol	↘	Net sales and earnings decreased due to lower market prices compared with the same period of the previous fiscal year (FY2022 \$401→FY2023 \$308).
	Methanol and ammonia-based chemicals	↘	Net sales and earnings decreased reflecting the lower sales volume of MMA products and downturns in market prices for ammonia and other offerings.
Aromatic Chemicals	High-performance products	↘	Net sales and earnings decreased due mainly to lower sales volumes of MXDA and aromatic aldehydes, which reflected economic slowdown in the U.S. and Europe and resulting stagnation in demand.
	Xylene separators and derivatives	↘	Net sales and earnings decreased due primarily to a decline in the sales volume of purified isophthalic acid (PIA) and growing utility costs.
	Foamed plastics (JSP)	↗	Net sales and earnings increased thanks mainly to sales growth in step with the upward revision of product prices and raw material price decline.

Specialty Chemicals

FY2023 1Q Results

Net sales: Increased due to consolidation of Mitsubishi Engineering-Plastics Corporation (MEP).

Operating profit: Decreased due mainly to lower sales volume of electronic materials, polycarbonate (PC), PC sheet films and optical polymers, along with a decline in the market price of POM.

		FY2023 1Q Results (Compared with FY2022 1Q Results)	
Specialty Chemicals	Inorganic chemicals	↓	Net sales and earnings decreased, despite the upward revision of sales prices aimed at reflecting higher raw material and fuel prices—a factor contributing to profit—due mainly to stagnant semiconductor demand and resulting decline in the sales volume of chemicals for semiconductors.
	Engineering plastics	↓	While net sales increased due to the inclusion of MEP into the scope of consolidation, earnings decreased due mainly to downturns in POM market prices and sales volumes of PC and PC sheet films.
	Optical materials	↓	Net sales and earnings decreased as demand for smartphones, a primary application of optical polymers, remained sluggish.
Information & Advanced Materials	Electronic materials	↓	Net sales and earnings decreased year on year. This reflected constantly stagnant demand for semiconductors, although sales level of BT materials have been on a recovery track since FY 2022 4Q, especially in general-purpose materials.
	Oxygen absorbers	↓	Net sales and earnings decreased on the back of a recoil from the temporary surge (due to stay-at-home demand) for products marketed in Japan for food applications, a decline in export sales, higher raw material prices and other factors.

[FY2023 1H]

Compared to the previous forecast, operating profit -8.0 billion yen, ordinary profit -8.0 billion yen

Compared to the previous forecast, downturns in POM market prices, a delay in the pace of recovery in demand for BT materials, and a decline in the sales volumes of PC, MXDA and MMA products are expected. Therefore, net sales and each profit indicator are expected to fall short of the previous forecast.

[FY2023 2H]

The forecast for net sales and operating profit has been left unchanged (revisions by segment have been made).

Ordinary profit -1.0 billion yen (due mainly to decrease in equity in earnings of affiliates resulting from a decline in methanol market price)

See page 13 for key points of 2H forecast.

- Maintenance costs for Niigata and Kashima plants, etc. are expected to increase.
- Methanol: The market price is assumed to be \$310 (1Q: \$308).
- MXDA and aromatic aldehydes: Sales volumes are expected to increase from 1Q due to gradual recovery in demand in Europe and the U.S.
- Electronic chemicals (chemicals for semiconductors): Demand is expected to remain weak due to ongoing sluggish demand for semiconductors.
- POM and PC: POM market prices are expected to be at the same level as 1Q. PC and PC sheet films are also expected to remain at the same profit level as 1Q.
- Optical polymers: Sales volume is expected to increase compared to 1Q, even though smartphone demand will remain weak.
- BT materials: Although demand is assumed to recover in earnest in 2H and beyond, sales volume is expected to increase compared to 1Q.

■FX assumptions (2Q): \$1=¥135 (¥2 appreciation against 1Q), €1=¥145 (¥4 appreciation against 1Q)
(Sensitivity (USD, rough estimate): with an appreciation (depreciation) of ¥1 against the USD, annual operating profit falls (increases) by ¥0.6 bn, while annual ordinary profit falls (increases) by ¥0.6 bn.)

■Crude oil price assumption (2Q): \$80/bbl. (\$2 increase from 1Q)
(Sensitivity (USD, rough estimate): A \$1/bbl. increase (drop) in crude oil reduces (raises) profit by ¥0.2 bn., excluding methanol affect)

Key Points of the Forecast for FY2023 2H

[Basic Chemicals]

- Methanol: Both demand recovery and market conditions are expected to reverse. Market price forecast is set at \$340/MT (1H: \$309/MT).
- MXDA and aromatic aldehydes: Sales volume is expected to increase due to recovery in demand in Europe and the U.S.
- Foamed plastics (JSP): Profit levels are expected to exceed the previous forecast due to strong sales of foamed polypropylene and softening raw material prices.
- As in the past years, a regular maintenance is scheduled at Mizushima Plant in 4Q.

[Specialty Chemicals]

- Electronic chemicals (chemicals for semiconductors): Sales volume is expected to increase in line with the recovery in demand for semiconductors.
- POM and PC: Recovery in demand for automotive and office automation applications is expected. In PC, we will continue to curb sales of unprofitable products, while improving profitability by increasing sales volume of high transparency products, compound products and PC sheet films.
- Optical materials: An increase in sales volume is expected due to production for new smartphone models and other factors.
- BT materials: An increase in sales volume is expected due mainly to a recovery in demand for memory devices and an increase in sales for smartphones.

■FX assumptions: \$1=¥135 (¥5 depreciation from the previous forecast), €1=¥145 (¥5 depreciation from the previous forecast)
(Sensitivity (USD, rough estimate): Compared to the previous forecast, +¥1.5 bn./2H)

■Crude oil price assumption: \$80/bbl. (same as the previous forecast)
(Sensitivity (USD, rough estimate): Compared to the previous forecast, ±¥0 bn./2H)
