Press Release

Asteria Certified as a Partner of Milesight, and Its IoT Monitoring Systems Accelerate Data Utilisation Collaborating with Gravio

---

Tokyo -- October 26, 2023 -- Asteria Corporation (Japan listed, Security Code: 3853) announced today that it has been certified as a partner of Xiamen Milesight IoT Co., Ltd. (hereinafter "Milesight"), a developer and provider of IoT monitoring system products with its fully-owned subsidiary in Singapore Asteria Technologies Pte, Ltd.
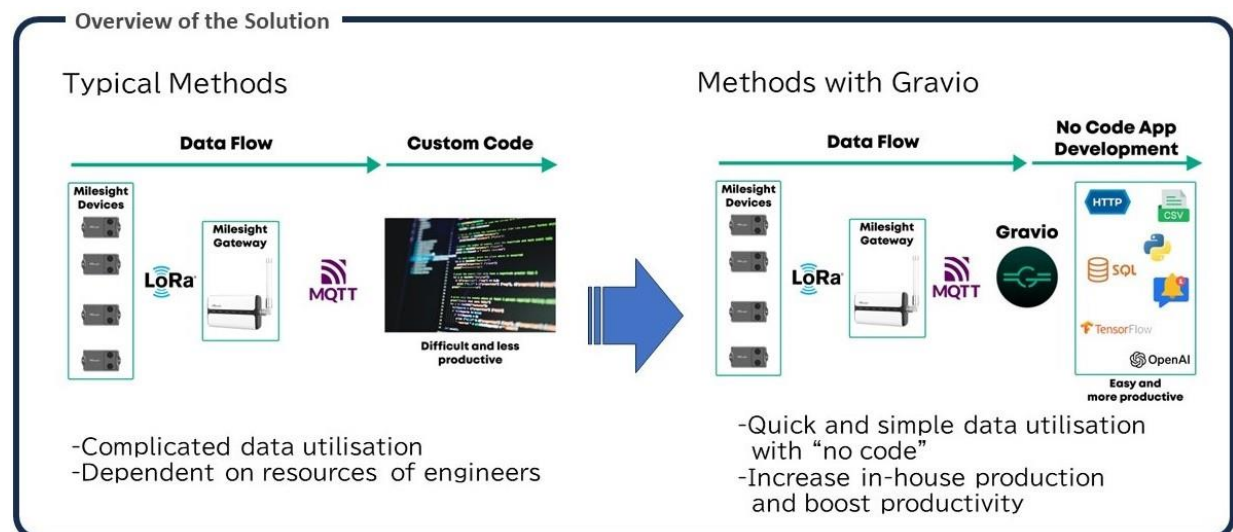

■**Background**

Milesight - founded in 2011 - is an IoT product provider, focusing on cutting-edge technologies such as AI, 5G and LoRaWAN. It provides solutions enabling user companies in 120 countries/regions worldwide to optimise their operations efficiently and sustainably.

Asteria's Gravio has been adopted by companies in various industries for its ability to collect data from sensors and other devices without coding, control device functions and connect to numerous tools and services. The new-generation Gravio as a "node computing platform", released in June 2023, enables connection between digital devices, edge computers and cloud services. It also contributes to efficient data collection and integration from multiple locations.

A subsidiary in Singapore, the development base, provides Gravio overseas. Asteria and the subsidiary in Singapore were certified as Milesight partners since the benefits of using Gravio in integration with Milesight's LoRaWAN-compatible products, which allow gathering and managing data without coding.

Through this partnership, Gravio is accessible in the coverage area of Milesight. It allows the development of power-saving and efficient data use solutions that connect Milesight's LoRa devices used for LoRaWAN with Gravio. Milesight and Asteria plan to promote digital transformation for companies throughout the world by making it easier and quicker to utilise on-site data via solutions that combine the technologies of the two companies.

＜**Overview of the Collaboration between Milesight Products and Gravio**＞

■About Xiamen Milesight IoT Co. Ltd.

Milesight is a fast-growing high-tech company delivering smart IoT and video surveillance products with a focus on IoT technologies, including Artificial Intelligence, 5G and LoRaWAN, since 2011. With improved sensing capability and advanced IoT insights, we help customers worldwide optimize their business operation in a more efficient and sustainable way. In collaboration with a global network of distributors and system integrators, we are committed to building open ecosystems and accelerating IoT strategies to the next level.

■About Asteria Corporation

Asteria is a software development company, which provides products and services that "connect" systems, people, things and wills to the future based on the concept of "Connecting the World with Software". Its flagship product, ASTERIA Warp, is middleware which integrates data from different systems and cloud services without coding. As of August 1, 2023, over 10,000 companies had introduced the product. Another product, Handbook, is a business negotiation support app which enables consolidated management of data from diverse origins, such as documents, videos, and websites, through the cloud. Mobile app building tool Platio allows users to easily create and distribute mobile apps befitting specific in-house tasks. Node computing platform Gravio enables integrated management of data collected from multiple areas without coding. By offering these products, Asteria helps companies and organizations promote digital transformation (DX) and improve their business process efficiency.

Furthermore, Asteria is engaged in activities to raise awareness of new technologies and their values and foster innovation through participation in the launch of Blockchain Collaborative Consortium and No Code Promotion Association.

■About Node Computing Platform Gravio

Gravio collects field data from nodes installed in various locations and integrates them into the Gravio Cloud service, a centralized data management system. The collected data can be seamlessly linked to other services for effective utilization, and various settings can be easily configured without coding with a user-friendly UI. Gravio, which is made up of both edge and cloud computing systems, node devices, sensors, and data storage and management services, will facilitate on-site DX.
