(\*3) CO2 reduction is calculated as based on adjusted emission coefficient by electric power companies. For more details, please refer to the link (<https://www.env.go.jp/press/104919.html>).

## 2. Solar Power Generation During the Month of October 2023

The Fund portfolio generated actual electricity production of 21,244,039 kWh during the month of October 2023, equivalent to 100.69 % of the forecasted electricity production. The month of October produced lower power generation at CS Kama-shi PV and CS Miyako-machi Saigawa PV, due to the effect of the temporary curtailment conducted. The Fund will be able to receive the basic rent from the lessee even if the actual power generation by each power plants on a monthly basis falls below basic rent which is 70% of the forecasted power generation.
