January Ichigo and Ichigo Green solar and wind power generation was 6% above forecast due to an above-average number of productive daylight hours along the Japan Sea coast of Northern, Eastern, and Western Japan, and the Pacific coast of Western Japan, and a 14% increase year-on-year due to bringing online the Ichigo Ebino Suenaga ECO Power Plant on January 2, 2024.

<sup>1</sup> CO2 reduction is calculated as 0.435kg CO2 per kWh, except for the Ichigo Nago Futami ECO Power Plant (owned by Ichigo Green) for which it is calculated as 0.649kg CO2 per kWh, using the adjusted CO2 emission factor disclosed by the Ministry of Environment on March 1 of each year as a fixed constant until February of the following year.

<sup>2</sup> Forecast power generation is a 50% probability mean annual production forecast (P50 forecast), calculated by an independent, third-party technical consulting firm, that

serves as the base forecast for each solar and wind power plant's operating plan.
